Impression and actions taken									
Medical institution number				Name of health checkup institution					
examination				License number		Name of doctor		(Signature)	

* The purpose of a health checkup for infants is **to check their normal growth and development**. Even though the current results are normal, abnormal findings may appear in the future growth and development process.

- * In case of a certain disease with low prevalence, it might not be detected by the health checkup.
- * Even if the result of a health checkup is determined as Good, please keep the continuous effort to maintain a good state of health, and if the result is determined as “Caution” or “Further evaluation required,” please consult your doctor.
- * If the doctor’s impression in which the subject needs medical care is stated on the notification letter of the health checkup result, the notification letter can serve as a medical care referral (treatment referral) for treatment at a more advanced hospital.
- * It is helpful to bring your result report of this time for your next checkup.
